HIPPO VALVE V TYPE
1000/2000 Series
Class 150 Class 300

Double Offset High Performance Butterfly Valve

V TYPE 1000 / 2000 Series

High Performance Double-Offset Butterfly Valve

Type : Wafer, Lug, Flanged

Size : DN50~DN1200
2" ~ 48"

Pressure Rating : PN10, PN16, PN20, PN25, PN40,
PN50 / Class 150, Class 300

Temperature Rating : -29°C ~ 230°C
-27°F ~ 450°F

Patented Floating Seat Retainer

Bi-direction Zero Leakage

Low Fugitive Emission System

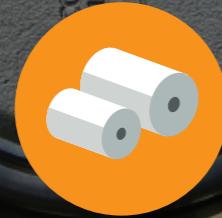

Fire Safe: Compliance with API 607

High Cycle Life

General Application

Chemistry

Pulp and Paper

Petrochemical

Air Separator
and HVAC

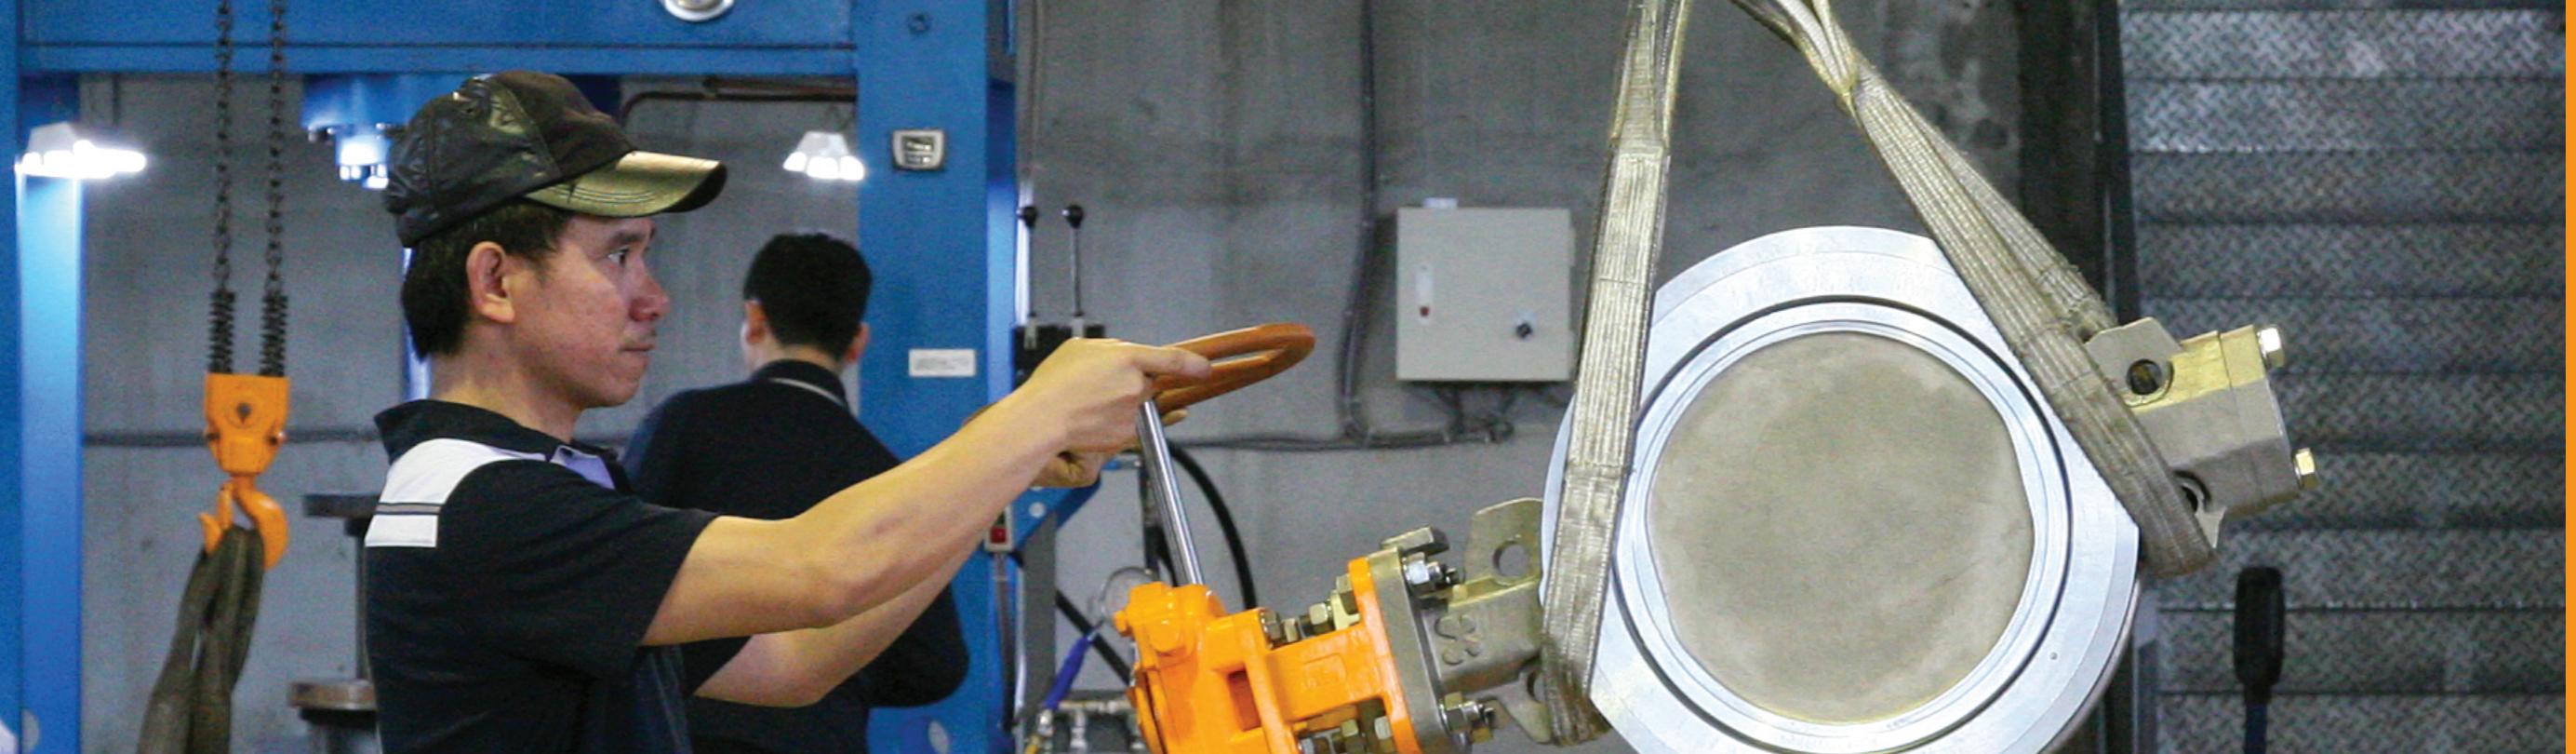

Energy and
Power Plant

Water Treatment

COMPANY PROFILE

HIPPO Valve Co., Ltd. is a TUV ISO9001 certified professional High Performance Double-Offset Butterfly Valve and Triple-Offset Metal Seated Butterfly Valve manufacturer. We are a new subsidiary from an 1985 established Mariposa Valve.

With more than 40 years experience in butterfly valve and other related products, our engineering teams have had serve lots industries as chemistry, pulp and paper, petrochemical, air separator and HVAC, energy and power plant, and water treatment.

In order to deliver high quality, HIPPO Valve, a professional butterfly manufacturer, integrates our 40 years experience and valve engineering knowledge into new generation valves.

Now we are pleased to introduce our synergy of latest engineering software PTC Creo Parametric, modern 3D CAD simulation, advanced CNC devices, and 40 years experience. All above best performances are 100% implemented in our new released reliable and trustable V1000/2000 High Performance Double-Offset Butterfly Valve Series.

SPECIFICATION

Testing : API 598, ISO 5208

Pressure-Temperature Rating : API 609

Valve Design : ASME B16.34, MSS-SP-68

Anti-Blow-Out Stem : API 609

Facc-to-Face : API 609, MSS-SP-68, ISO 5752

Fire Safe : API 607

Low Fugitive Emission Gland Packing System

: DIN3780, MSS-SP-143

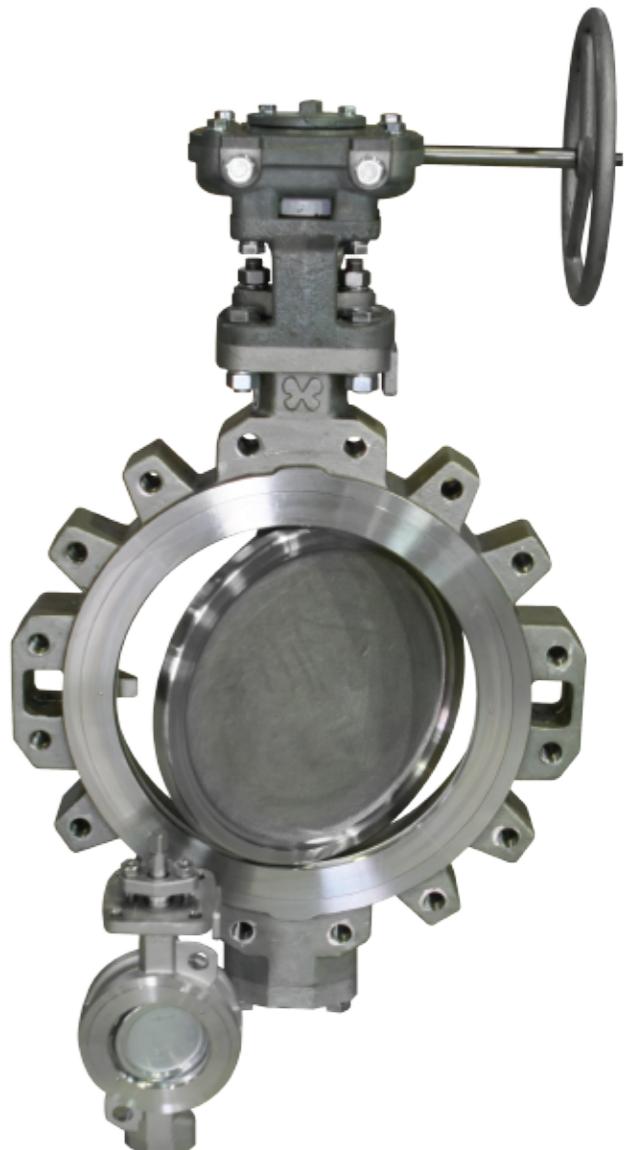

Marking : MSS-SP-25, API 609

Top Mounting : ISO 5211

Suitable Flange : ANSI 150lb, 300lb,

DIN:PN10, 16, 20, 25, 40, 50

JIS: 10K, 16K, 20K, 30K, 40K

FEATURES

Gland Flange

A fully adjustable two-piece gland flange to make sure an even packing load over 360 °.

Anti-Blow-Out Stem

Protecting stem blow-out caused by pressure.

Gland Bush

Standing alone with Gland Flange, preventing uneven down-pressure on gland packing.

Gland Packing

Use PTFE or same as Valve Seat. Performance is compliance with API 598's testing pressure.

Valve Seat

Bi-direction zero leakage design. Use Higa-PTFE, RTFE, or UHMWPE.

Taper Pin

Tangentially positioned half in disc and half in stem to eliminate potential of failure.

Patented Retainer Ring

A no-screw-floating design to eliminate cold flow. This design provides positive tight shut-off of seat. Surface roughness is 125-200AARH.

Thrust Ring

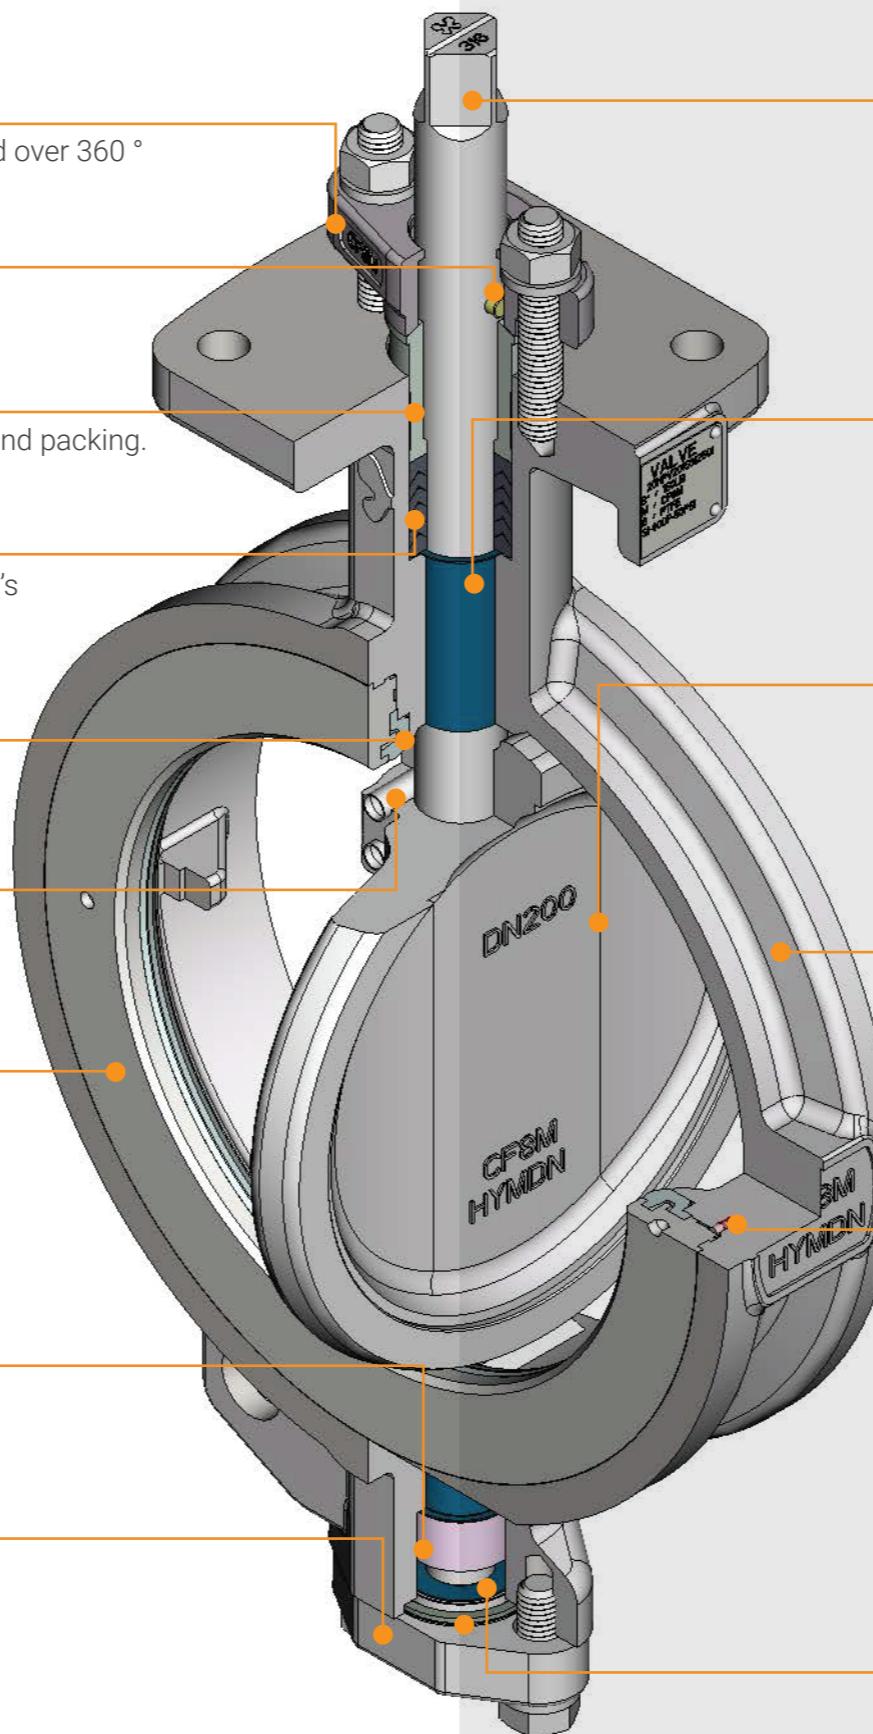

Use 316 as material. Position in bottom of stem for preventing incorrect stem shift.

Bottom Cover

Use rigid 316 as material to prevent abnormal leakage.

Bottom Gasket

Use RTFE or GRAPHITE as material.

Valve Stem

Use stainless-steel with hard chrome plated. A strong and rigid one-piece-stem design which largely increase overall strength. Stem and corresponding components size are all compliance with ISO 5211. Stem material and disc position is marked on the top of stem.

Self-Lubricant Bush

Use PTFE+316 as material to lower down stem's friction factor.

Valve Disc

Use stainless-steel with hard chrome plated. A streamlined design with great enhancement on lowering noise and turbulence.

Valve Body

Compliance with API 609 & ASME B16.34. In order to make valve context intuitive and straightforward, an additional name plate is designed to mark detail information.

Lock Pin and Spring

Use PTFE. While Retainer Ring moves to locking position, spring will pop-up and push pin locked in Retainer Ring.

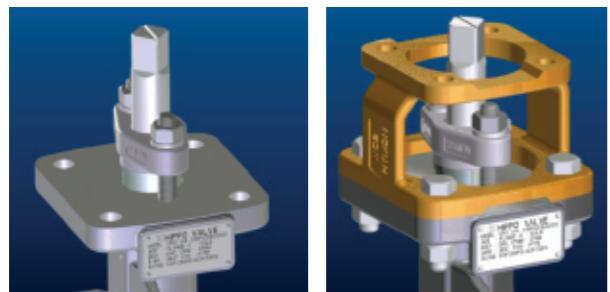

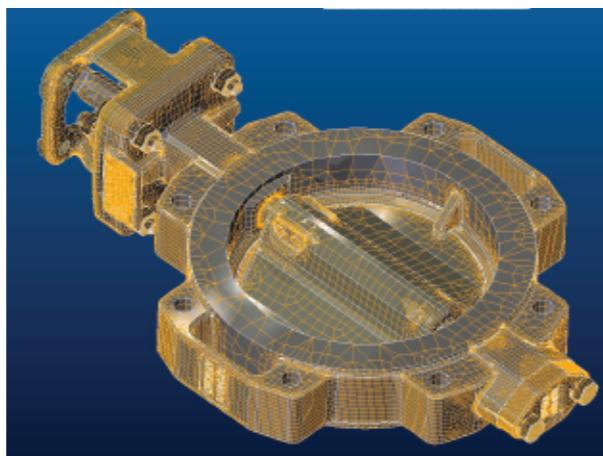

Thrust Plate

Use stainless-steel 316+PTFE to reduce operating friction between stem and bottom cover.

FEATURES

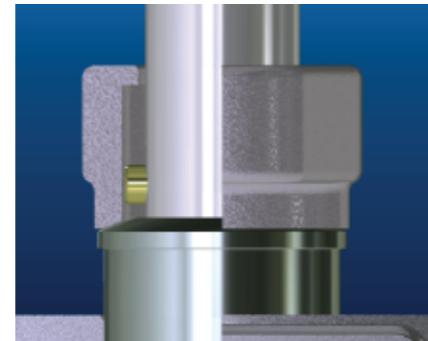

Valve Body

HIPPO Valve V-Type 1000/2000 Series High Performance Butterfly Valves are designed 100% compliance with API 609 and ASME B16.34. Utilizing PTC Creo Parametric (Pro/E) Computer-add-design in every component and result in best reliability.

Anti-Blow-out Stem and Anti-Electrostatic System

An anti-Blow-out design and optional Anti-electrostatic system. Compliance with API 609 and ATEX.

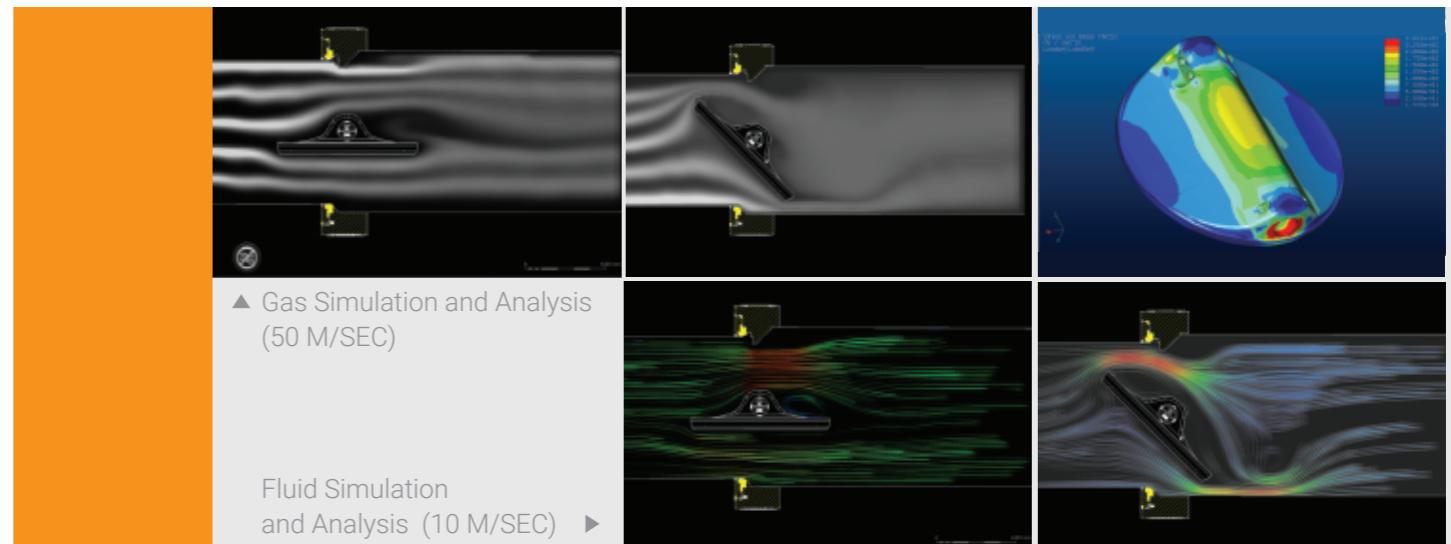

Marking and Name Plate

HIPPO Valve designed additional platform. Providing distinct information about valve details. Compliance MSS-SP-25 & API 609.

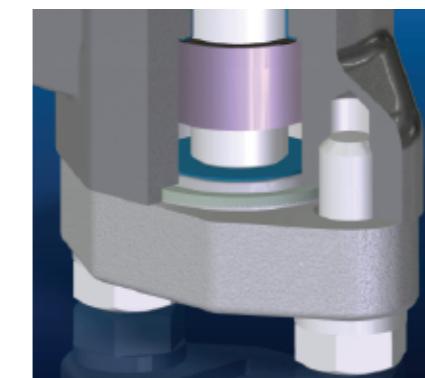

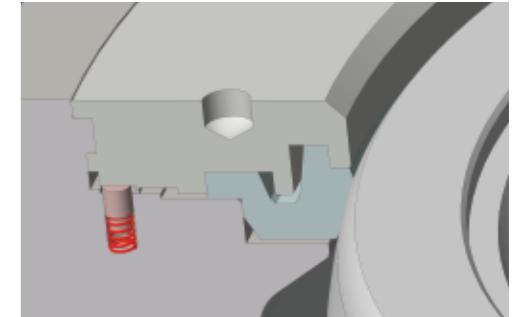

Valve Disc

Valve disc uses stainless steel with computer-add PTC Creo Parametric software to analyze stress performance to achieve API 598. Based on advanced 3D CAD simulation, HIPPO Valve developed a streamlined disc with lower noise and turbulence. Meanwhile, all our disc's and stem's surface are hard-chrome-plated. This feature significantly enlarges disc performance of anti-rubbing and anti-shocking, which result in better life cycle.

Patented Retainer Ring

A HIPPO Patented Retainer Ring. During installation, screwing this ring into internal tooth of valve body, then a stainless-steel spring catch and PTFE pin will pop-up to fix retainer ring and valve body in correct position. This design enlarge the flange-gasket's touching surface, which provides better tolerance for installation error.

Thrust Ring for Positioning

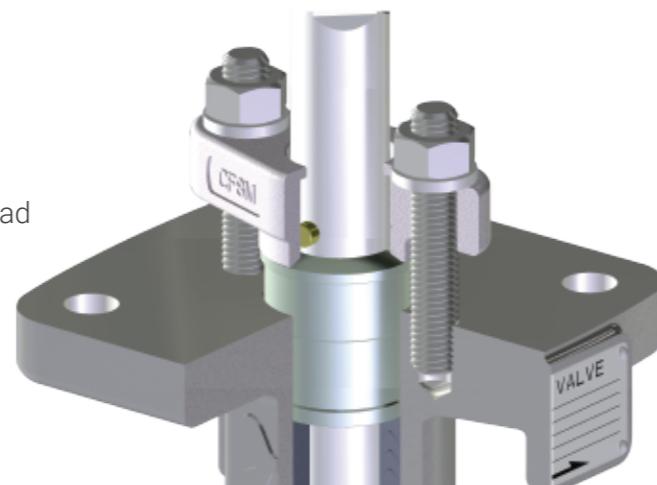

A Rigid Thrust Ring keeps stem always in an accurate position. This feature leads HIPPO Valve to fully reliability.

Low Fugitive Emission Gland Packing System

Compliance with latest DIN3780 and MSS-SP143

Gland Flange and Gland Bush

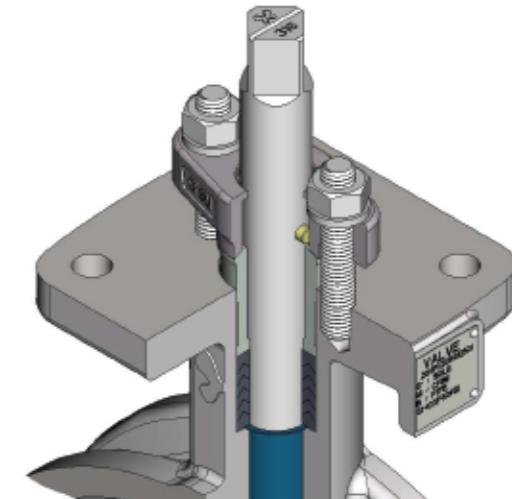

A fully adjustable two-piece gland with spherical mating surfaces to make sure an even packing load over 360 °

Long Gland Bush for Positioning

Long gland bush ensures gland flange always keep in center while adjust packing gland.

Preventing gland bush away from rubbing and jamming condition with stem.

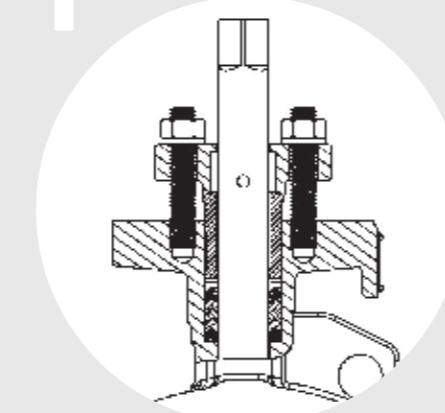

Gland Packing System

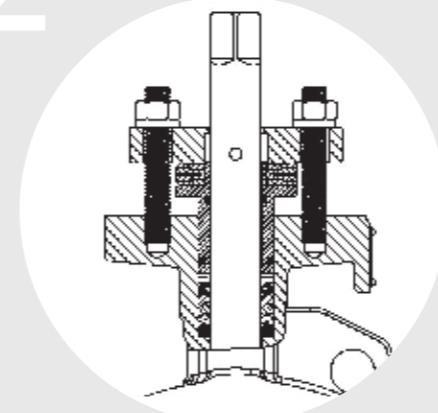

Five types:

1. Standard V-Type PTFE or RTFE
2. Live Loading Low Fugitive Emission V-Type PTFE or RTFE
3. Standard GRAPHITE
4. Live Loading Low Fugitive Emission GRAPHITE Having EVSP 9000 or 3300W in option.
5. Live Loading with Lantern Ring

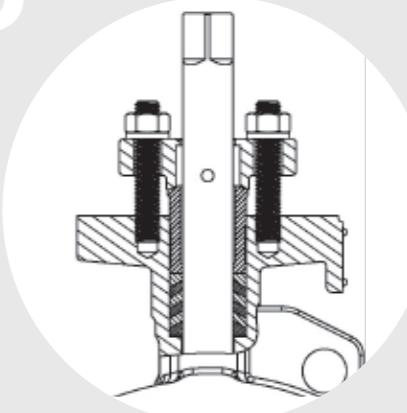

1 Standard V Type PTFE or RTFE Gland Packing System

2 Live Loading Low Fugitive Emission V-Type PTFE or RTFE Packing System

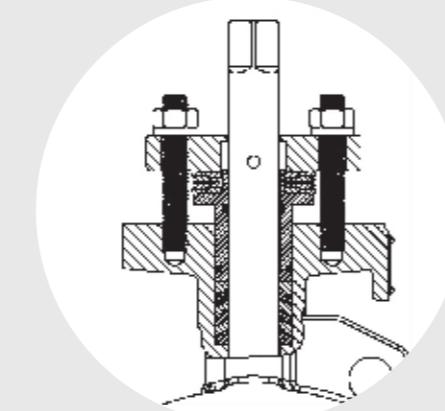

3 Standard GRAPHITE Packing System (Fire Safe Only)

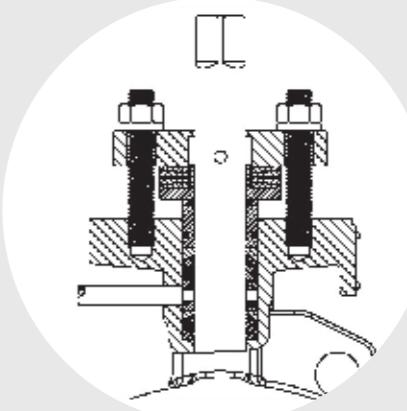

4 Live-Loading Low Fugitive Emission GRAPHITE Gland Packing System

Having EVSP 9000 or 3300W in option.

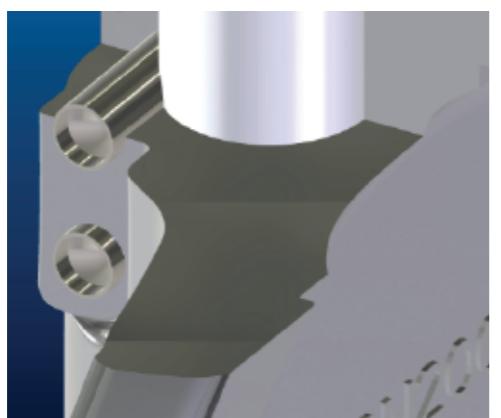

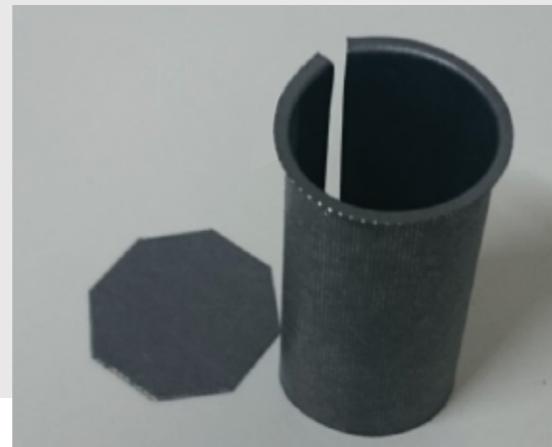

5 Live Loading with Lantern Ring Gland Packing System

A lantern ring with double packng leak-off-monitoring, provides functionality of purge and monitor leakage from bottom packing.

Self-Lubricant Bush

Uses RTFE+S.S 316 stem bush. Has excellent working temperature, strength rating, and low friction factor. Maintain good seat sealing capability even after high-cycle operations.

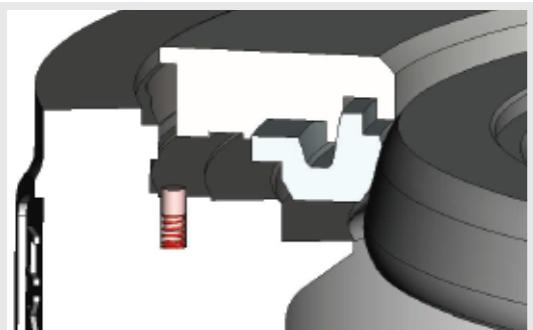

Taper Pin

Disc taper pins are tangentially positioned half in disc and half in stem, placing them in compression rather than shear, which eliminates potential of failure. This method is 3 times stronger than traditional shear way.

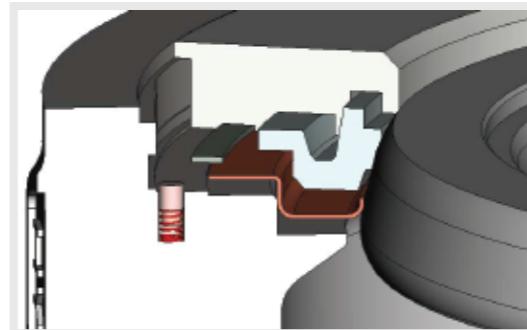

Valve Seat

HIPPO V TYPE 1000/2000 Series design 2 types of seat: Soft Seat and Fire-Safe Seat. Pressure-Temperature Rating is compliance with API 609. Using reliable section and corresponding floating seat to achieve bi-directional, drop-tight zero leakage closure throughout all pressure ranges, as well as full rated differential pressure. This design reduces rubbing and friction between disc and seat which significantly results longer life cycle. With Higa-PTFE, V TYPE 1000/2000 Series can keep 285PSI bi-direction zero leakage after 100,000 times operations. And it will even higher while valve is working in vacuum environment.

Comparing to general PTFE, our Higa-PTFE has 2.5 times higher in Load-Deformation-Rate, 1.5-4 times higher in Acid-Alkaline Permeability. Meanwhile, PTFE, RTFE, UHMWPE are available.

< Standard Type >

< Fire-Safe Type >

PMI Production Inspection

QUALITY ASSURANCE

1. Testing: 100% tested before shop-out.
2. Operating Torque: 100% validated before shop-out.
3. Material Inspection: verified by PMI(Portable X-ray Material Inspector) and Optical Spectrometer.

CERTIFICATE

The Certification Body
of TÜV SÜD Management Services GmbH
certifies that

Hippo valve Co., LTD.
No.17, Ln.28, Sanyang Rd., Vitro Dist.,
New Taipei City, Taiwan, R.O.C.
Post Code: 220

has established and applies
a Quality Management System for
Design, Manufacturing and Sales of Industrial Valves

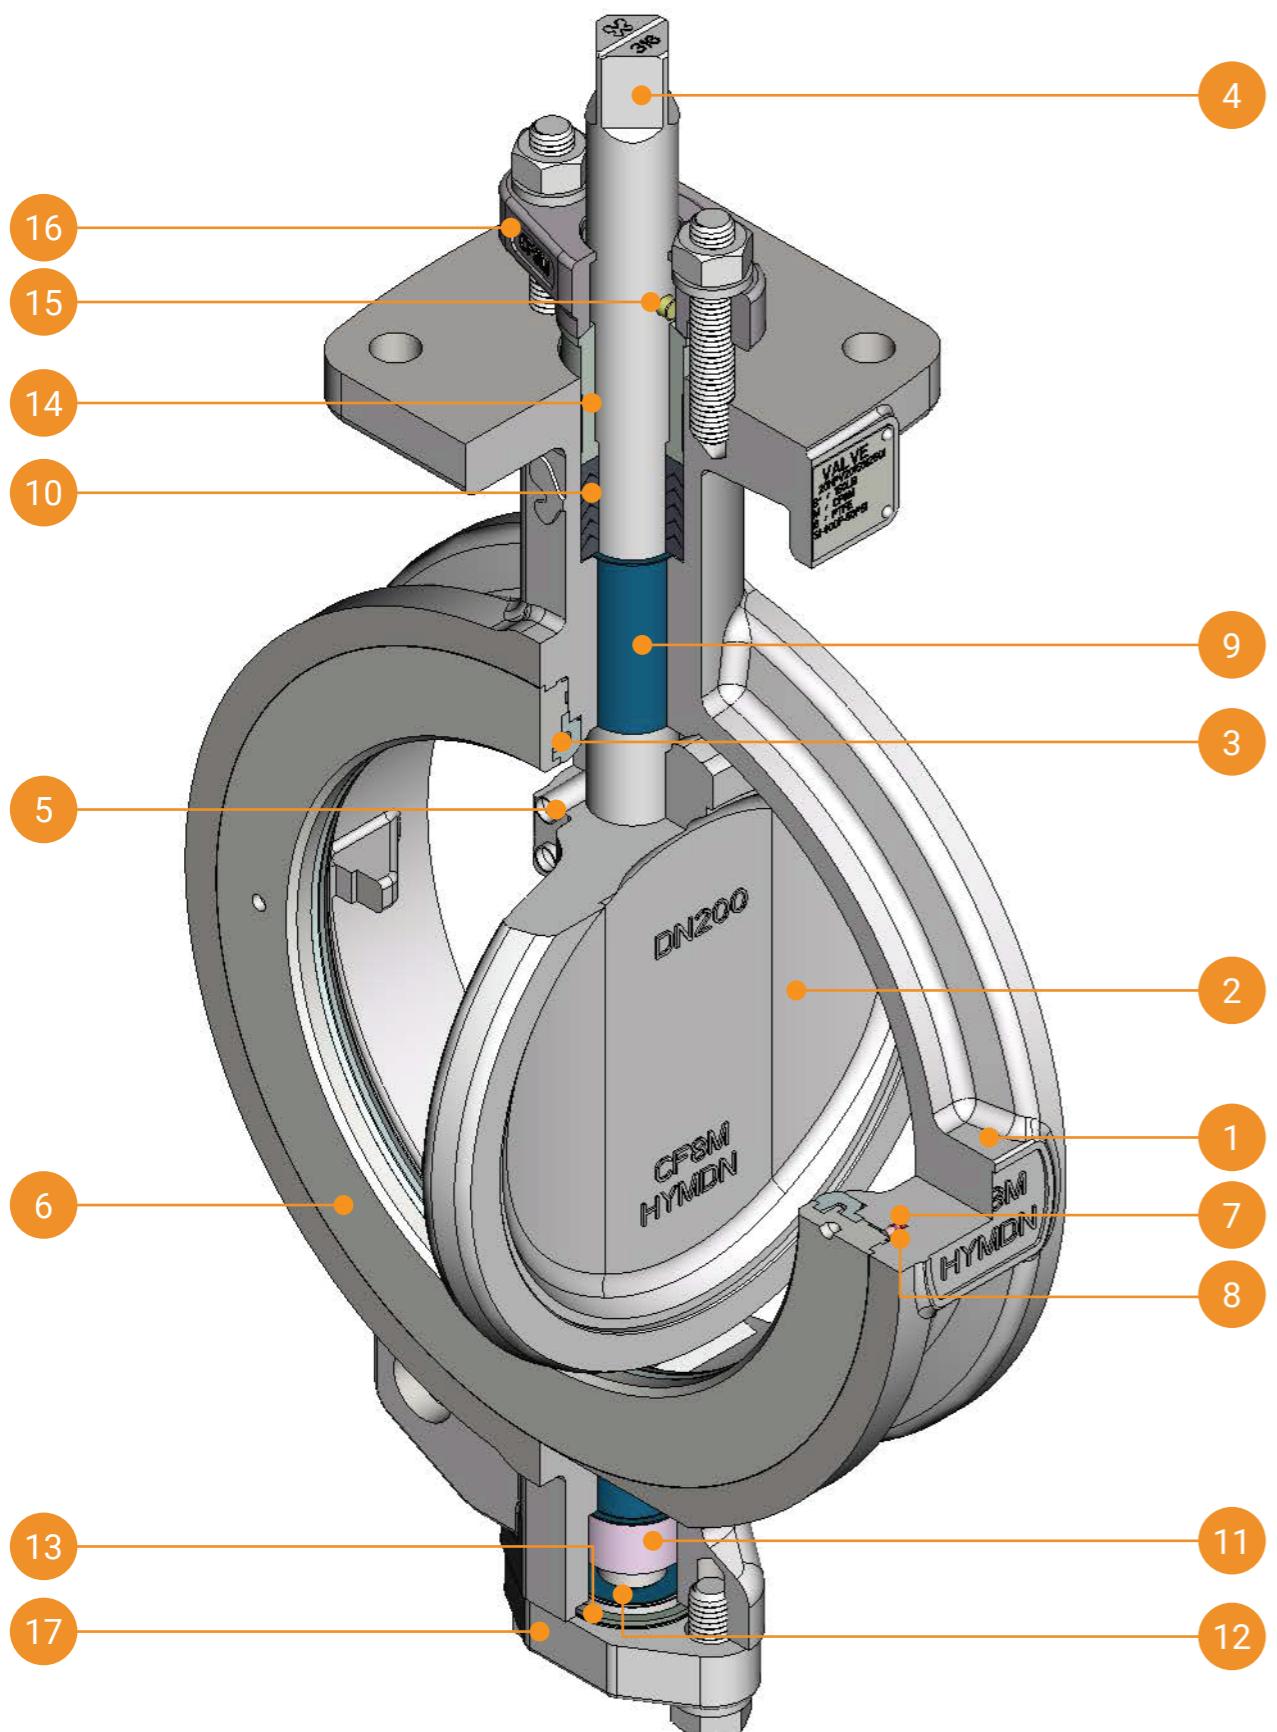

An audit was performed, Report No.: 201802972.
Product has been tested and found the requirements
according to

ISO 9001:2008
one fulfilled. The certificate is valid from 2018-02-17 until 2018-02-19.
Certificate Registration No.: 12 180 49873 TMS

Remark

- Surface is Hard Chrome Plated
- ▲ Same as ITEM 3 SEAT's material. If valve is Fire-Safe design, use GRAPHITE as material.
- ★ Working temperature: PTFE -29~180 °C , RTFE -29-230°C
- When VOC Emission is requested, ITEM10 has 2 more materials, EVSP 9000 and 3300W, in option.
- The listed materials are assorted with standard package. We have ALLOY 20, HASTELLOY C276, Duplex A890 6A , MONEL in option. Please contact us for more details.
- Item 4 uses 17-4PH or UNS S31803 for Class 300LB.

INSTALLATION INSTRUCTION

1. Performance is dominated by installation operation. Improper installation might damage valves.
2. Proper installation is very important to make valves work in a good condition. Please follow instructions as below:
 - a. Carefully remove protecting plates and check nameplate and tags.
 - b. Read alarms or labels with valve and take proper actions.
 - c. Check valve direction symbol. If suggested flow-direction arrow is marked, please follow recommend direction to install valve.
 - d. Check inside of valve is clean with no harmful articles.
 - e. Carefully perform one full-cycle operating check before installation if possible.
 - f. In last step before installation, check pipe flange is in correct position with clean status.

3. Screw Installation Sequence

NOTICE

1. Do NOT remove Valve Protector unless you need to check or install valve.
2. Valve should wear water protector and uphold away from ground while storing in outdoor environment.
3. Operation Torque might be increased when valve is not operated in long time. HIPPO Valve suggests to operate valve once every 6 months.
